

# PYRAMID

PRODUCTS

**INSTRUCTIONS MANUAL**  
THE USE OF PYRAMID ENERGY  
IN DOMESTIC CONDITIONS 2016

## The necessity of the pyramid

From the beginning of times, people we have built pyramids and used pyramid energy in different ways. The word "pyramid" comes from the Greek word pyra – fire and maidos – mountain "mountain of fire". The pyramid energy affects materials efficiently and fairly quickly.

## Using and assembling the pyramid

- Put the pyramid together as shown on the figure below.
- Find a suitable location for the pyramid in the kitchen or in some other room. When there is more than one pyramid, it is best to place them in different rooms.
- Place the pyramid on the suitable location with the side tabs facing the north-south direction. To determine the direction, use a compass, making sure it shows correctly.
- In addition to the energetic effect, the pyramid also functions as a decorative element, having a calming effect on a person's state of mind and regulating living space energies.

## The characteristics of pyramid energy

The model pyramid is intended to be used in domestic conditions for receiving two types of energy:

- 1. The internal energy** - "life energy" induced by negatively charged electromagnetic potential
- 2. The external energy** - electromagnetic energy induced by different ionization radiation

## Why and how?

To use the internal energy of the pyramid, place the impressionable object inside the pyramid. The durations of the exposure time are presented in the following list.

Materials and substances may be kept and maintained inside the pyramid longer than the recommended exposure time. It is advisable to use spring water and pure bottled water for drinking and humidification. To protect foods from the airborne dust, it is recommended to cover them with gauze or thin linen.

**Nota bene:** always use the model pyramid in well ventilated indoor spaces at air temperature of +5...+40°C and at 30...70% relative air humidity.

Herbs and foods placed under the pyramid.

## Effect on foods

- to decrease the side effects of foods caused by chemical effects 1,0 kg  $\geq$  3,0 hours, 2,0 kg  $\geq$  5,0 hours;
- to improve the flavour and preservation characteristics of raw foods (meat, fish, etc.) for prolonged storage in the refrigerator and for preparation of culinary processed healthy food 1,0 kg  $\geq$  3,0 hours, 2,0 kg  $\geq$  6,0 hours;
- to improve the flavour and preservation characteristics of organic foods (fruits, vegetables, etc.) 1,0 kg  $\geq$  1,0 hours, 2,0 kg  $\geq$  2,0 hours;
- to improve the flavour and curative characteristics of organic juices and other non-alcoholic organic drinks 200 g  $\geq$  30 min, 500 g  $\geq$  1,5 hours, 1000 g  $\geq$  3,0 hours;
- to improve or change the flavour and aroma characteristics of tea and coffee drinks 100 g  $\geq$  30 min, 200 g  $\geq$  40 min;
- to improve or change the flavour and aroma characteristics of sweets 100 g  $\geq$  20 min, 200 g  $\geq$  30 min, 300 g  $\geq$  1,0 h, 500 g  $\geq$  2,0 hours;
- to improve or change the flavour and aroma characteristics of alcoholic beverages 100 g  $\geq$  30 min, 200 g  $\geq$  1,0 hours, 300 g  $\geq$  1,5 hours, 500 g  $\geq$  3,0 hours;
- to improve or change the flavour and aroma characteristics of cigarettes, cigars and pipe tobacco 1 cigarette  $\geq$  30 min, pack 2,0 hours, block 8,0 hours;
- to improve the flavour, storage and curative characteristics of drinking water 100 g  $\geq$  20 min, 200 g  $\geq$  30 min, 350...500 g  $\geq$  2,0 hours, 1000 g  $\geq$  6,0 hours.

## Environment, plants, pets and household items

- to improve the preservation and curative characteristics of water used for humidification 500 g  $\geq$  2,0 hours; 1000 g  $\geq$  6,0 hours;
- to improve the characteristics of water for plants and drinking, to energise smaller potted flowers 200 g  $\geq$  30 min, 500 g  $\geq$  2,0 hours;

- to improve the characteristics of water for aquarium fish and the health of fish when placed on the aquarium  $\geq 7,0$  hours;
- to improve the flavour, preservation and curative characteristics of drinking water for pets (cat, dog, hamster, mouse, etc.) 500 g  $\geq 2,0$  hours, 1000 g  $\geq 6,0$  hours;
- to improve the odour, preservation, emollient, soothing and curative characteristics of cosmetics  $\geq 1,0$  hours on average;
- to influence the characteristics of natural medications;
- natural therapeutic agents  $\geq 1,0$  hours on average;
- to reload precious and curative minerals, stones  $\geq 1,5$  hours on average;
- to clean jewellery, talismans, amulets from bad energy and reload with power  $\geq 1,5$  hours on average;
- to sharpen razor blades  $\geq 8,0$  hours on average;
- to energise batteries  $\geq 8,0$  hours on average;
- to dry medicinal plants  $\geq 24,0$  hours on average;
- to transmit written wishes placed under (information field) the pyramid  $\geq 1,0$  hours on average,  $\geq 24$  hours to fill.

## The use of external energy of the pyramid

The external energy of the pyramid spreads from the outer sides-edges and functions as multi-directional. The external energy is used as follows (depending on the direction of disperse):

From north	<b>N</b>	for improvement and treatment of health
From northeast	<b>NO</b>	for diagnosing health on the basis of improvement of feeling
From east	<b>O</b>	for diagnosing health on the basis of deterioration of feeling
From southeast	<b>OS</b>	for diagnosing health on the basis of deterioration of feeling
From south	<b>S</b>	for diagnosing health on the basis of serious deterioration of feeling
From southwest	<b>SW</b>	for diagnosing health on the basis of deterioration of feeling
From west	<b>W</b>	for improvement and treatment of health
From northwest	<b>WN</b>	for improvement and treatment of health

## Verifying the correct orientation and location of the pyramid

To verify the correct location of the pyramid, take a small rectangular container (a glass, ceramics, plastic). Pour liquid honey into the container so that it covers the bottom completely. Then place the container inside the pyramid, which in your opinion is located and oriented in the right direction. Place the longer side of the honey container in north-south direction. If the placement of the pyramid is correct, then after three days the honey should become solid. If the honey has not become solid in five days, check the position of the container and pyramid. It is also necessary to check the distance from electric and magnetic influences (electrical cables, sockets, refrigerator, household appliances, etc.). When everything worked correctly and the honey became solid, then shift the pyramid to a new position (without moving the honey container) and direct its base corner to the north. The honey should become liquid during the day. When replacing the pyramid back to its correct position, the honey should again become solid.

## Safety and usage requirements

- The pyramid is sensitive to electromagnetic energy, magnetic energy and electrical energy radiating from artificial sources of energy. Thus, it is not recommended to place the model pyramid on top and near the refrigerator, as well as near the electric cables and home appliances. The advisable distance from these factors is  $\geq 30$  cm. In some cases, the safe distance is considered to be  $\geq 2,0$  m.
- There can be changes in flavour characteristics in some substances when using the pyramid energy.
- On certain days the pyramid energy may not have effect, when there are changes in the Earth's magnetic and electric fields (the Sun, the Moon, weather changes, etc.).
- When placed under the pyramid, it is recommended to cover the food products with gauze or thin linen to protect them from airborne dust. The perfect material for storage is glass or ceramic clay.
- It is not recommended to place the pyramid into armchairs or under the bed to avert radiance of water slots and earth fields, because of the overactive energy coming from the tip of the pyramid.
- The electromagnetic energy released from the outer sides-edges of the pyramid has dual effect. That is why, with respect to human, the placement height, distance and orientation of the side wall of the pyramid is important when it is placed into the kitchen or other rooms. The extent of the pyramid's electromagnetic energy of the external energy in empty space is up to 3 m.
- The preferable energy for living organisms is the external energy dispersing from the W, WN, N and NO sides-edges of the pyramid, which has a curative and healing effect.
- In case of hypersensitivity, the electromagnetic energy spreading to the room as a wave from the O, OS, S, and SW sides-edges of the pyramid rather causes malaise.
- It is possible to cover the pyramid with a canopy (cope) of silk, linen or paper-cardboard material. In case of paper-cardboard material it is necessary to leave the side walls of the pyramid a bit opened to ensure free access of air.

- The model pyramid has effect only in a room with fresh air. The food odours emerging from cooking obstruct its work.
- From time to time it is recommended to wipe the parts of the model pyramid with dry clean cloth and if necessary freshen it with fine sandpaper.

## Warranty terms

When used correctly, the warranty of the model pyramid as a physical product is 12 months from the date of purchase. The manufacturer is obliged to satisfy consumer complaints about the defects caused by the manufacturer. The warranty does not apply to external changes of the product.

## Technical characteristics and complexity of the pyramid

Dimensions	external dimensions: 440x440x280 mm
Capacity of the pyramid	0,0112 m <sup>3</sup>
Material	birch plywood
Weight	... g

## Included in the set

Model pyramid	1 piece
User manual	1 piece
Base of the pyramid (when there is one)	1 piece
Cover of the pyramid (when there is one)	1 piece
Wrapping	1 piece

## Quality and sales certificate of the product

Made in: Estonia

Manufacturer: Pyramid Products OÜ
